- SSL certificates for HTTPS enabled websites
- Includes Domain
- Protected by the Vox security team

Product Overview

Need a website?

Bridge IT provides a locally hosted, dedicated hosting service without the headache of managing a server. Shared Web Hosting is a thing of the past. The trade-off with low cost is often slow speeds, downtime and security risks. Unlike Shared Web Hosting, our Single Line offering is a solution for customers that require better performance, uptime and scalability.

With the boom in E-commerce, your website is the face of your business, and is often the first experience customers have. A slow loading and unattractive website will drastically impact your business. Traditionally, Shared Web Hosting splits resources across multiple customers, making it impossible to deliver a guaranteed level of service.

Bridge it hosting offers the following:

- Dedicated Hosting infrastructure
- High-speed storage, ensuring premium performance
- Professionally designed and responsive themes for visual appeal

- Guaranteed performance with the ability to upgrade when required
- Ongoing backups to ensure you don't lose your website
- Locally hosted servers with 99.9% uptime guarantee

Need a face for your business?

Features and Benefits

Feature:	Benefit:
Dedicated Hosting Infrastructure	Giving you complete control over your website by providing customised resources for your needs.
High-speed storage	Our premium performance storage is optimised for giving you the edge with faster loading pages.
Enabled caching for static content	Deliver websites significantly faster by caching static files.
Website Vulnerability Scans	A monthly Vulnerability Scan provides a way to identify and classify problem areas around the website. Locate each flaw and target vulnerabilities based on severity of the gap to prevent any breach or exposure.
Protected by the our cloud Security	Your website sits behind Bridge IT's next generation firewalls with malware and virus protection, intrusion prevention, web app security and DDoS protection.
24x7 Support	Our servers are locally hosted and managed around the clock by the best engineering team for peace of mind.
