

Take your phone system to the cloud

BRIDGEIT'S cloud phone solution is a cost-effective service which includes many features that our competitors charge you extra for. Not only is our service feature rich, but one of the most stable, fully managed services available on the market.

What counts in **VoIP** today is **reliability**! Our platform is modular, as a result, each client is running on its own virtual instance. Our unique approach to infrastructure design means by its very nature we are operating a more reliable solution than is possible by our competitors.

Standard Package

Our core service comes without Handsets or Softphone, meaning you can use your existing handsets or order new pre-configured handsets from us. Within a matter of minutes you can increase the capacity of your service and meet the demands of your business that same day.

With the benefits in efficiency and productivity that new technology brings, a **cloud PBX system** will also reduce call costs and bring down monthly service charges.

Features Included:

Full Managed
Service

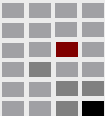

Call Packages
Available
